

# 2,4-D ESTER 500 EC MENU:

#### What is it?

2,4-D ESTER 500 EC is a post-emergence broadleaf herbicide containing the active ingredient 2,4-D, a phenoxy compound, as iso-octyl ester, 2,4-D ESTER 500 EC is of the chemical family "aryloxyalkanoic acids" and acts as an auxin growth regulator.

#### What does it do?

2,4-D ESTER 500 EC is a selective emulsifiable concentrate registered for postemergence control of broadleaf weeds in wheat (Free State only) and established grass pastures.

## Weed spp. controlled by 2,4-D ESTER 500 EC:

Amaranthus spp. Pigweed Misbredie Bidens pilosa Blackjack Knapsekêrel Withondebossie Chenopodium album White goosefoot Commelina benghalensis Wandering Jew Wandelende Jood Datura ferox Large thorn apple Grootstinkblaar Common thorn apple Datura stramonium Gewone stinkblaar Common purslane Portulaca oleracea Gewone porslein Tagetes minuta Tall khakiweed Langkakiebos Kankerroos Xanthium strumarium Cockle bur

## How and When to Apply:

2,4-D ESTER can be applied post-emergence of crop and weeds by means of ground or aerial application. Spray drift must be avoided onto susceptible crops e.g. all broadleaf crops as well as all grain varieties in a susceptible stage of growth.

Weeds should only be sprayed in the young stages and when growing actively in a moist soil.

On wheat, application must be carried out between growth stages 7 and 13 according to the growth stages of the Small Grain Centre and on grass pastures, application can be done once the grass has become established.

### **Product Label: Download Now**

A specimen Product Label is available for download. Amongst other information, the 2,4- D ESTER 500 EC label outlines the current registered uses as well as rates, directions for use, general instructions, safety instructions and warnings.
