Prestige™ XC Herbicide Tank-Mix

GROUP 4 HERBICIDE

FOR SALE FOR USE ONLY IN THE PRAIRIE PROVINCES AND PEACE RIVER REGION OF BRITISH COLUMBIA

Prestige XC Herbicide Tank-Mix provides control of a wide spectrum of broadleaved weeds including hard-to-control weeds such as cleavers, kochia, wild buckwheat, perennial sow thistle and Canada thistle, and suppression of hemp-nettle and common chickweed, in spring wheat, durum wheat and spring barley.

PRECAUTIONS
KEEP OUT OF REACH OF CHILDREN
DANGER - CAUSES SUBSTANTIAL BUT TEMPORARY EYE INJURY. DO NOT GET IN EYES.
HARMFUL IF SWALLOWED, INHALED OR ABSORBED THROUGH THE SKIN
CAUSES SKIN IRRITATION

DO NOT APPLY BY AIR

Prestige XC B Herbicide contains an ingredient that is rapidly absorbed through the skin and respiratory tract.

DO NOT get in eyes. Avoid contact with skin and clothing. Avoid breathing spray mist or vapour.

Reentry is not permitted until 12 hours after application for all agricultural scenarios.

Do not use in residential areas, which are defined as sites where bystanders may be present during or after spraying, including homes, schools, parks, playgrounds, playing fields and public buildings.

If this pest control product is to be used on a commodity that may be exported to the U.S. and you require information on acceptable residue levels in the U.S., visit CropLife Canada's web site at www.croplife.ca.

PROTECTIVE CLOTHING AND EQUIPMENT
Wear a hat, coveralls over a long-sleeved shirt and long pants, socks, rubber boots and chemical-resistant gloves during spraying or application. In addition, wear goggles or face shield during mixing, loading, repair and clean-up or when handling the concentrate. Applicators using a closed cab are not required to wear chemical-resistant gloves.

OPERATOR USE PRECAUTIONS
Wear freshly laundered clothing and clean protective equipment daily. At completion of spraying or end of the day take a shower immediately. Wash thoroughly with soap and water before eating, drinking, smoking or using the toilet. Remove contaminated clothing at the end of the work session and store and wash separately from household laundry using detergents and hot water before reuse. If herbicide penetrates clothing, remove immediately; then wash thoroughly and put on clean clothing. Throw away clothing and other absorbent materials that have been drenched or heavily contaminated with this product's concentrate.

PHYSICAL OR CHEMICAL HAZARDS
COMBUSTIBLE. Do not use or store near heat or open flame. Use only in a well ventilated area.

FIRST AID
Take container, label or product name and Pest Control Product Registration Number with you when seeking medical attention.

If swallowed: Call a poison control centre or doctor immediately for treatment advice. Do not induce vomiting unless told to do so by a poison control centre or doctor. Do not give any liquid to the person. Do not give anything by mouth to an unconscious person.

If on skin or clothing: Take off contaminated clothing. Rinse skin immediately with plenty of water for 15-20 minutes. Call a poison control centre or doctor for treatment advice.

If inhaled: Move person to fresh air. If person is not breathing, call 911 or an ambulance, then give artificial respiration, preferably by mouth-to-mouth, if possible. Call a poison control centre or doctor for further treatment advice.

If in eyes: Hold eye open and rinse slowly and gently with water for 15-20 minutes. Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye. Call a poison control centre or doctor for treatment advice.
TOXICOLOGICAL INFORMATION
THIS PRODUCT CONTAINS A PETROLEUM DISTILLATE. Vomiting may cause aspiration pneumonia. The decision of whether to induce vomiting or not should be made by the attending physician. If lavage is performed, suggest endotracheal and/or oesophageal control. Danger from lung aspiration of petroleum based solvents must be weighed against toxicity when considering emptying the stomach. No specific antidote. Employ supportive care. Treatment should be based on the judgment of the physician in response to reactions of the patient. High concentrations of MCPA may cause severe irritation to the eyes. Symptoms of overexposure to MCPA could include slurred speech, twitching, jerking and spasms, drooling, low blood pressure and unconsciousness.

AGRICULTURAL CHEMICAL
Do not ship or store with food, feeds, fertilizers, drugs or clothing.

ENVIRONMENTAL HAZARDS
This product contains a petroleum distillate which is moderately to highly toxic to aquatic organisms. Avoid contamination of aquatic systems during application. Do not contaminate these systems through direct application, disposal of waste or cleaning of equipment. This product is also toxic to non-target terrestrial plants. Observe buffer zones specified under DIRECTIONS FOR USE.

The use of this chemical may result in contamination of groundwater particularly in areas where soils are permeable (e.g. sand, loamy sand and sandy loam soils) and/or the depth to the water table is shallow.

To reduce runoff from treated areas into aquatic habitats, consider the characteristics and conditions of the site before treatment. Site characteristics and conditions that may lead to runoff include, but are not limited to, heavy rainfall, moderate to steep slope, bare soil, poorly draining soil (e.g. soils that are compacted, fine-textured, or low in organic matter such as clay).

Avoid applying this product when heavy rain is forecast.

Contamination of aquatic areas as a result of runoff may be reduced by including a vegetative strip (buffer zone) between the treated area and the edge of the water body.

STORAGE
Store in original tightly closed containers in a secure, dry heated storage. If product is frozen, bring to room temperature and agitate before use. Do not allow contamination of seeds, plants, fertilizers or other pesticides. Do not contaminate food, feedstuffs or domestic water supplies. If containers are damaged or spill occurs, use the product immediately or contain the spill with absorbent materials and dispose of waste.

DISPOSAL
Recyclable Containers:
Do not reuse this container for any purpose. This is a recyclable container, and is to be disposed of at a container collection site. Contact your local distributor/dealer or municipality for the location of the nearest collection site. Before taking the container to the collection site:

1. Triple- or pressure-rinse the empty container. Add the rinsings to the spray mixture in the tank.
2. Make the empty, rinsed container unsuitable for further use.

If there is no container collection site in your area, dispose of the container in accordance with provincial requirements.
**Returnable Containers:**
Do not reuse this container for any purpose. For disposal, this empty container may be returned to the point of purchase (distributor/dealer).

For information on disposal of unused, unwanted product, contact the manufacturer or the provincial regulatory agency. Contact the manufacturer and the provincial regulatory agency in case of a spill, and for clean-up of spills.

**GENERAL INFORMATION**
Prestige XC Herbicide Tank-Mix is a selective postemergence herbicide for the control of broadleaved weeds in spring wheat, durum wheat, and spring barley (not underseeded to legumes). Prestige XC Herbicide Tank-Mix provides control of hard-to-kill broadleaved weeds such as cleavers, kochia, wild buckwheat, Canada thistle and perennial sow thistle, and suppression of common chickweed and hemp-nettle. The components of Prestige XC Herbicide Tank-Mix move within the plant to control exposed and underground plant tissues. It mimics naturally occurring plant hormones which control weeds by disrupting normal plant growth patterns. Symptoms of effect include epinasty (twisting of the stems) and swollen nodes.

**DIRECTIONS FOR USE**

**GENERAL USE PRECAUTIONS**
READ THE ENTIRE LABEL BEFORE USE. FAILURE TO FOLLOW LABEL INSTRUCTIONS MAY RESULT IN ERRATIC WEED CONTROL OR CROP DAMAGE.
DO NOT APPLY TO CROPS UNDERSEEDED WITH LEGUMES.

Do not use in greenhouses

Apply only when the potential for drift to areas of human habitation or areas of human activity (such as houses, cottages, schools and recreational areas) is minimal. Take into consideration wind speed, wind direction, temperature inversions, application equipment sprayer settings.

To minimize spray drift to non-target areas:
1. Do not use nozzles that produce a fine spray droplet.
2. Minimize drift by using sufficient spray volume to ensure coverage with large droplet size sprays.
3. Keep ground-driven spray booms as low as possible above the target surface.
4. Spray when wind is less than 8 km/hr.

Do not spray in dead calm near sensitive plants. The “cloud” of suspended droplets may drift onto sensitive plants when the wind comes up. Spray only when wind is blowing away from a sensitive crop, shelterbelt or garden.

Extreme growing conditions such as
- Drought or near freezing temperatures prior to, at and following time of application may reduce weed control and increase the risk of crop injury at all stages of growth.
- Wet foliage at the time of application may result in reduced weed control.
- Over-application may result in crop injury.
- Make only 1 application per year.
- Do not apply through any type of irrigation system.

**DO NOT APPLY BY AIR. GROUND EQUIPMENT ONLY.**
**Sprayer Clean-up**
Sprayers used to apply Prestige XC Herbicide Tank-Mix should not be used to apply other pesticides to sensitive crops without a thorough cleaning. Do not contaminate irrigation or drinking water, lakes, streams or ponds when cleaning the sprayer. Spray equipment should be cleaned after use by the following procedure:

1. Drain the sprayer tank.
2. Hose down the interior surfaces of the tank. Flush tank, hoses, boom and nozzles with clean water for 10 minutes. Fill the tank with water and recirculate for 15 minutes. Spray part of the mixture through the hoses, boom and nozzles and drain the tank.
3. Remove the nozzles and screens and clean them separately.
4. If the spray equipment will be used on other crops other than cereal crops, repeat 1 and 2 again and thoroughly wash the spray mixture from the outside of the spray tank and the boom.

**SENSITIVE PLANTS**
Do not apply Prestige XC Herbicide Tank-Mix directly to, or otherwise permit it to come in direct contact with susceptible crops or desirable plants including alfalfa, edible beans, canola, flowers, fruit, and ornamentals, lentils, lettuce, peas, potatoes, radishes, soybeans, sugar beets, sunflowers, tomatoes or tobacco.

**ROTATIONAL CROP RESTRICTIONS**
Fields previously treated with Prestige XC Herbicide Tank-Mix can be seeded to wheat, barley, oats and rye (not under-seeded for forage legumes, clover or alfalfa), canola, field peas, flax, mustard, or can be summer-fallowed. Seed only those crops listed above in the year following treatment. Do not seed to field peas for at least 10 months following treatment. Very dry soil conditions following application can result in a risk of injury to field peas grown in rotation. If severe drought conditions are experienced during the months of June to August inclusive in the year of application, delay seeding field peas an additional 12 months (total 22 months following application). Contact your local Dow AgroSciences Canada representative or retailer for more information before seeding field peas following drought conditions in the previous year.

**PRE-HARVEST/GRAZING INTERVALS**
- Do not cut or graze treated fields of wheat or barley within 7 days after application.
- Do not harvest wheat or barley within 60 days after application, or within 7 days after application when harvesting for forage.
- Withdraw meat animals from treated fields at least 3 days before slaughter.

**Tank Mixtures**
Do not apply this product with any other additive, pesticide or fertilizer except as specifically recommended on this label. When a tank mixture is used, consult the labels of the tank-mix partners and observe the largest (most restrictive) buffer zone of the products involved in the tank mixture.

**APPLICATION DIRECTIONS**
Prestige XC Herbicide Tank-Mix will provide wide spectrum broadleaved weed control in spring wheat, durum wheat, and spring barley.

**DO NOT APPLY TO CROPS UNDERSEEDED WITH LEGUMES.**
I. Low Rate: To control the following weeds apply a uniform spray containing 0.31 L/ha of Prestige XC A and 1.5 L/ha of Prestige XC B in a minimum of 100 L of water to thoroughly cover the weeds.

Weeds Controlled
- buckwheat, wild (1-8 leaf)
- cleavers (1-4 whorls)
- Canada thistle (low infestations)
- flax, volunteer (1-12 cm)
- flixweed (spring seedling 2-4 lf)
- kochia ***

Weeds Controlled
- lamb's-quarters
- mustard, wild
- shepherds purse
- stinkweed
- stork's-bill (1-8 leaf)
- sunflower, volunteer

II. High Rate: To control the above weeds plus the following weeds apply a uniform spray containing 0.41 L/ha of Prestige XC A and 2.0 L/ha of Prestige XC B in a minimum of 100 L of water to thoroughly cover the weeds.

Weeds Controlled
- buckwheat, tartary
- Canada thistle * (medium to high infestations)
- canola, volunteer
- dandelion **
- groundsel, common
- mallow, round-leaved (1-6 leaf)
- pigweed, red-root
- pigweed, Russian
- scentless chamomile
- smartweed
- sowthistle, annual
- sowthistle, perennial *
- stork's-bill (1-8 leaf)

Weeds Suppressed
- common chickweed ***
- hemp-nettle (2-6 leaf stage)

* Season long control, with some regrowth in the fall (top growth control).
** Spring rosettes only.
*** Including biotypes resistant to Group 2 herbicides that inhibit the ALS enzyme.

The active ingredients in this tank mixture will only control chickweed that is emerged at time of application. Chickweed plants which emerge after application will not be controlled. To improve the reduction in chickweed population at the end of season, delay the timing of application as late as possible to when the majority of chickweed plants have emerged. The reduction in chickweed population will also be improved in crops which are more competitive and which allow limited light penetration.

NOTE: Prestige XC Herbicide Tank-Mix activity is influenced by weather conditions. Optimum activity requires active crop and weed growth. The temperature range for optimum activity is 12°C to 24°C. Reduced activity will occur when temperatures are below 8°C or above 27°C. Frost before application (3 days) or shortly after (3 days) may reduce weed control and crop tolerance. Weed control may be reduced during stress conditions, e.g. drought, heat or cold stress, or if weeds have initiated flowering, or if heavy infestations exist.

Timing of Application
Apply postemergence when weeds are in the seedling stage (2-4 leaf) and when spring wheat, durum wheat, and spring barley are in the 3-leaf to just before the flag leaf emergence stage. Do not apply later than the flag-leaf emergence stage. A maximum of 1 application per year.
Mixing Instructions
1. Fill sprayer tank 1/2 full of water.
2. Start sprayer tank agitation.
3. Add the required number of jugs of Prestige XC A.
4. Add the required number of jugs of Prestige XC B.
5. Fill the sprayer tank with sufficient water to spray 100 L of spray mixture per hectare.
6. Follow sprayer directions and precautions as outlined above, especially when applying next to sensitive crops (e.g., canola and legumes).
7. Follow sprayer clean-up directions as listed.

Spray Application
Apply Prestige XC Herbicide Tank-Mix in sufficient spray volume to provide uniform coverage using properly calibrated ground equipment. A total spray volume of 100 L/ha using low pressure (200 to 275 kPa) application is recommended. Maintain sufficient agitation in the spray tank during mixing and spraying to ensure a uniform spray mixture.

Field sprayer application
DO NOT apply during periods of dead calm. Avoid application of this product when winds are gusty. DO NOT apply with spray droplets smaller than the American Society of Agricultural Engineers (ASAE) coarse classification. Boom height must be 60 cm or less above the crop or ground.

TANK MIXES WITH PRESTIGE XC HERBICIDE TANK-MIX FOR ANNUAL GRASS CONTROL
Tank mixtures of Prestige XC Herbicide Tank-Mix with other herbicides will provide control of additional weeds. Read all precautions, minimal interval to harvest and directions for use on the Prestige XC Herbicide Tank-Mix and tank-mix partner labels, and follow the more stringent of the two.

Tank mixes with ACHIEVE herbicides may cause temporary injury if applied before the 4-leaf stage, however, yield will not normally be affected.
NOTE TO USER: READ THE FOLLOWING BEFORE USING THIS PRODUCT FOR THE INDICATED SPECIAL USE APPLICATIONS: The DIRECTIONS FOR USE for this product for the use(s) described below were developed by persons other than Dow AgroSciences Canada Inc. and accepted for registration by Health Canada under the User Requested Minor Use Label Expansion program. Dow AgroSciences Canada Inc. itself makes no representation or warranty with respect to performance (efficacy) and/or crop tolerance (phytotoxicity) claims for this product when used on the crop(s) listed below.

Accordingly, the User assumes all risks related to performance and crop tolerance arising, and agree to hold Dow AgroSciences Canada Inc. harmless from any claims based on efficacy and/or phytotoxicity in connection with the use(s) described on this label.

DIRECTIONS FOR USE

SEEDLING AND ESTABLISHED TALL FESCUE GROWN FOR SEED: For control of labelled weeds on seedling (4 leaf to flag leaf) or established tall fescue grown for seed. Apply one post-emergent application when weeds are at the 2-4 leaf stage. Ground application only. Do not cut treated fields for hay/forage. Do not graze treated fields.

Application rates (Apply as a tank-mix only): Apply Prestige XC A at a rate of 0.41 L/ha. Apply Prestige XC B at a rate of 2 L/ha.

Apply in a minimum spray volume of 100 L/ha.

FOR CONTROL OF LABELLED WEEDS IN THE FOLLOWING SEEDLING AND ESTABLISHED FORAGE GRASSES GROWN FOR SEED IN THE PRAIRIE PROVINCES AND PEACE RIVER REGION OF BRITISH COLUMBIA ONLY:

Creeping Red Fescue
Intermediate Wheat Grass
Crested Wheat Grass
Meadow Brome Grass
Smooth Brome Grass
Timothy

Apply one application per year in a spray volume of 100-200 L/ha to control labelled weeds in seedling (4 leaf to flag leaf) or established forage grasses. Application should be made postemergence when weeds are in the 2-4 leaf stage. Apply in a broadcast spray using a hydraulic boom ground sprayer.

Application rates (Apply as a tank-mix only): Prestige XC A: 0.41 L/ha; Prestige XC B: 2.0 L/ha.

- Do not cut treated fields for hay/forage. Do not graze treated fields. Do not harvest the treated crop within 60 days of application.

LABELLED ANNUAL AND PERENNIAL BROADLEAVED WEEDS IN CANARYSEED (Phalaris canariensis)

For the control of labelled annual and perennial broadleaved weeds in canaryseed (Phalaris canariensis), apply Prestige XC A at a rate of 0.41 L/ha and Prestige XC B at a rate of 2.0 L/ha in a minimum of 100 L of water to thoroughly cover the weeds with a spray pressure of 200 to 275 kPa. Apply when weeds are in the seedling stage (2-4 leaf) and when canaryseed (Phalaris canariensis) is in the 3-leaf stage up to just before the flag leaf emergence stage. Apply using a ground boom sprayer, and apply only one post-emergent application per season. Do NOT apply within 60 days of harvest. For use in the prairie provinces and the Peace River regions ONLY of British Columbia.
A maximum of 2 applications is permitted per season with a minimum retreatment interval of 90 days.

Refer to the main Prestige XC Herbicide Tank-Mix label for additional details and instructions before using.

READ THE ROTATIONAL CROPPING RESTRICTIONS ON FULL LABEL BEFORE USING THIS PRODUCT.

BUFFER ZONES TO PROTECT SENSITIVE TERRESTRIAL AND AQUATIC HABITATS

Use of the following spray methods or equipment DO NOT require a buffer zone: handheld or backpack sprayer and spot treatment.

The buffer zones specified in the table below are required between the point of direct application and the closest downwind edge of sensitive terrestrial habitats (such as grasslands, forested areas, shelter belts, woodlots, hedgerows, riparian areas and shrublands), sensitive freshwater habitats (such as lakes, rivers, sloughs, ponds, prairie potholes, creeks, marshes, streams, reservoirs and wetlands) and estuarine/marine habitats.

**Buffer Zone Table**

<tr>
<td>Field sprayer*</td>
<td>cereals, canaryseed (Phalaris canariensis)</td>
<td>15</td>
</tr>
</tbody>
</table>

*For field sprayer application, buffer zones can be reduced with the use of drift-reducing spray shields. When using a spray boom fitted with a full shield (shroud, curtain) that extends to the crop canopy, the labelled buffer zone can be reduced by 70%. When using a spray boom where individual nozzles are fitted with cone-shaped shields that are no more than 30 cm above the crop canopy, the labelled buffer zone can be reduced by 30%.

When a tank mixture is used, consult the labels of the tank-mix partners and observe the largest (most restrictive) buffer zone of the products involved in the tank mixture and apply using the coarsest spray (ASAE) category indicated on the labels for those tank-mix partners.

RESISTANCE MANAGEMENT RECOMMENDATIONS

For resistance management, Prestige XC Herbicide Tank-Mix is a Group 4 herbicide. Any weed population may contain or develop plants naturally resistant to Prestige XC Herbicide Tank-Mix and other Group 4 herbicides. The resistant biotypes may dominate the weed population if these herbicides are used repeatedly in the same field. Other resistance mechanisms that are not linked to site of action, but specific for individual chemicals, such as enhanced metabolism, may also exist. Appropriate resistance-management strategies should be followed.

To delay herbicide resistance:
- Where possible, rotate the use of Prestige XC Herbicide Tank-Mix or other Group 4 herbicides with different herbicide groups that control the same weeds in a field.
- Use tank mixtures with herbicides from a different group when such use is permitted.
- Herbicide use should be based on an IPM program that includes scouting, historical information related to herbicide use and crop rotation, and considers tillage (or other mechanical), cultural, biological and other chemical control practices.
• Monitor treated weed populations for resistance development.
• Prevent movement of resistant weed seeds to other fields by cleaning harvesting and tillage equipment and planting clean seed.
• Contact your local extension specialist or certified crop advisors for any additional pesticide resistance-management and/or integrated weed-management recommendations for specific crops and weed biotypes.
• For further information or to report suspected resistance, contact Dow AgroSciences Canada Inc. at 1-800-667-3852 or at www.dowagro.ca.

NOTICE TO USER: This pest control product is to be used only in accordance with the directions on the label. It is an offence under the Pest Control Products Act to use this product in any way that is inconsistent with the directions on the label. The user assumes the risk to persons or property that arises from any such use of this product.
