Indar™
Fungicide

ACTIVE CONSTITUENT: 240 g/L FENBUCONAZOLE

GROUP 3 FUNGICIDE

For the control of certain disease in bananas, nectarines and wheat as specified in the Directions For Use.

CAUTION
KEEP OUT OF REACH OF CHILDREN
READ SAFETY DIRECTIONS BEFORE OPENING OR USING
DIRECTIONS FOR USE

RESTRAINTS:
DO NOT apply by aircraft to nectarines or wheat.

SPRAY DRIFT RESTRAINTS
DO NOT apply with spray droplets smaller than a MEDIUM spray droplet category as defined by the ASABE S572 Standard. Users MUST ONLY USE nozzles classified as suitable for delivering a MEDIUM spray droplet category according to the nozzle manufacturers specifications.
DO NOT apply when wind speed is less than 3 or more than 20 kilometres per hour as measured at the application site.
DO NOT apply during surface temperature inversion conditions at the application site.

Users of this product MUST make an accurate written record of the details of each spray application within 24 hours following application and KEEP this record for a minimum of 2 years. The spray application details that must be recorded are: 1. date and start and finish times of application; 2. location address and paddock/s sprayed; 3. full name of this product; 4. amount used per hectare and number of hectares applied to; 5. crop/situation and weed/pest; 6. wind speed and direction during application; 7. air temperature; 8. nozzle brand, model and type and spray system pressure measured during application; 9. name and address of person applying this product. (Additional record details may be required by the state or territory where this product is used).

MANDATORY NO-SPRAY ZONES
DO NOT apply if there are livestock, pasture or any land that is producing feed for livestock within 15 metres downwind of the application area.

<td>Nectarines</td>
<td>Brown Rot (Monilinia spp.)</td>
<td>15 mL/100 L  For Concentrate Spraying refer to the APPLICATION section</td>
<td>For protection against brown rot of fruit apply 2 sprays at 3 weeks and 1 week before harvest. In the case of susceptible varieties or conditions which are favourable for disease development, additional sprays before or during harvest may be required (note Resistance Management Strategy). Apply by dilute or concentrate spraying equipment. Apply the same total amount of product to the target crop whether applying this product by dilute or concentrate spraying methods. Do not use at concentrations greater than 40 mL/100 L of water.</td>
</tr>
</tbody>
</table>

Resistance Management Strategy (Nectarines)
Apply Indar Fungicide in a protective spray program. DO NOT wait until disease levels have built up to make applications as this reduces the effectiveness of control and increases the risk of resistance development.
DO NOT apply more than 2 consecutive sprays of Indar™ Fungicide or other Group 3 fungicide before changing to another group.

| Bananas (NSW, NT, Qld & WA only) | Leaf Spot/ Yellow Sigatoka (Mycosphaerella musicota) | 420 mL/ha + 5 L of water miscible oil | Tropical Areas (Nth Qld, NT and Northern WA)
Apply on a schedule of 14-21 day intervals using the shorter interval during periods of high disease pressure (e.g. during the wet season). When changing to protectant products (e.g. Dithane™ Rain Shield™ Neo Tec™ Fungicide) in the program after using Indar Fungicide, ensure the protectant is applied within 14 days of the last Indar application.
Sub-tropical Areas (Sth Qld and Northern NSW)
Apply on a schedule of 21-28 day intervals using the shorter interval during periods of high disease pressure. |

Resistance Management Strategy (Bananas)

Tropical Areas: Apply a regular schedule of protectant fungicides. When disease potential is high apply 2-3 consecutive Indar Fungicide sprays before changing to a fungicide from a different activity group (not Group 3). No more than 6 Group 3 sprays should be used in any 12 month period (Indar is a Group 3 fungicide). **DO NOT** use Group 3 fungicides during July, August or September.

Sub-tropical Areas: When using Indar Fungicide, always apply at least 2 consecutive sprays. **DO NOT** use more than 5 Group 3 fungicides in any 12 month period (Indar is a Group 3 fungicide).

<tbody>
<tr>
<td>Stripe rust (Puccinia striiformis)</td>
<td>150 to 300 mL plus Uptake™ Spraying Oil at 500 mL/100 L</td>
<td><strong>IMPORTANT:</strong> This product must be used with Uptake™ Spraying Oil at 500 mL/100 L. Apply before 1% of the leaf area is infected. Best results will be achieved when applied before disease is detected in the crop. Use the higher rate when disease is present at application; or when conditions favour disease development; or where longer residual protection is required. If a spray is applied prior to flag leaf emergence and conditions are favourable for disease development, then a second spray may be required. In this situation, spray at full flag leaf emergence and before 1% of the leaf area is infected. Crop growth stages: Do not apply later than head emergence (ZGS 59). Do not apply more than 2 applications of 300 mL/ha. <strong>Adjuvants:</strong> Always apply with Uptake Spraying Oil at 500 mL/100 L.</td>
</tr>
</tbody>
</table>

WITHOLDING PERIODS

Nectarines, Bananas: **DO NOT HARVEST FOR 1 DAY AFTER APPLICATION.**

Wheat: **NOT REQUIRED WHEN USED AS DIRECTED**

GRAZING WITHHOLDING PERIOD:

Nectarines, Bananas: **DO NOT ALLOW LIVESTOCK TO GRAZE ORCHARDS OR PLANTATIONS OR CUT FODDER FROM TREATED AREAS FOR STOCKFEED FOR 4 WEEKS AFTER APPLICATION.**

Wheat: **DO NOT ALLOW LIVESTOCK TO GRAZE CROP OR CUT HAY FROM TREATED AREAS FOR STOCKFEED FOR 14 DAYS AFTER APPLICATION.**

ANIMAL SLAUGHTER INTERVAL:

LIVESTOCK DESTINED FOR EXPORT MARKETS

The above grazing withholding period only applies to stock slaughtered for the domestic market. Some export markets apply different standards. To meet these standards, ensure that in addition to complying with the grazing withholding period, the below Export Slaughter Interval is observed before stock are sold or slaughtered.

EXPORT SLAUGHTER INTERVAL

After observing the withholding period for grazing or cutting for stock food, livestock that have been grazed on or fed treated crops should be placed on clean feed for 3 days prior to slaughter.

MANDATORY NO-SPRAY ZONE

**DO NOT** apply when there are livestock, pasture or any land that is producing feed for livestock within 15 metres downwind of the application area.
GENERAL INSTRUCTIONS
FUNGICIDE RESISTANCE WARNING

GROUP 3 FUNGICIDE

For fungicide resistance management the product is a Group 3 fungicide. Some naturally occurring individual fungi resistant to Indar Fungicide and other Group 3 fungicides may exist through normal genetic variability in any fungal population. The resistant individuals can eventually dominate the fungal population if these fungicides are used repeatedly. These resistant fungi will not be controlled by Indar Fungicide or other Group 3 fungicides, thus resulting in a reduction in efficacy and possible yield loss. Since the occurrence of resistant fungi is difficult to detect prior to use, Dow AgroSciences accepts no liability for any losses that may result from the failure of Indar Fungicide to control resistant fungi.

Note:
Indar Fungicide may be harmful to beneficial arthropods and may not be suitable for use in IPM programs.

APPLICATION: Nectarines

DO NOT apply to nectarines by aircraft.
Apply in a sufficient volume of water to achieve thorough coverage of all blossoms, fruit and foliage. The volume of water required to achieve this will depend on the size of the trees. Apply by dilute or concentrate spraying equipment.
Apply the same total amount of product to the target crop whether applying this product by dilute or concentrate spraying methods.
DO NOT use at concentrations greater than 40 mL/100 L of water.

Dilute Spraying
Use a sprayer designed to apply high volumes of water up to the point of run-off and matched to the crop being sprayed.
Set up and operate the sprayer to achieve even coverage throughout the crop canopy. Apply sufficient water to cover the crop to the point of run-off. Avoid excessive run-off. The required water volume may be determined by applying different test volumes, using different settings on the sprayer, from industry guidelines or expert advice.
Add the amount of product specified in the DIRECTIONS FOR USE table for each 100 L of water. Spray to the point of run-off.
The required dilute spray volume will change and the sprayer set up and operation may also need to be changed, as the crop grows.

Concentrate Spraying
Use a sprayer designed and set up for concentrate spraying (that is a sprayer which applies water volumes less than those required to reach the point of run-off) and matched to the crop being sprayed.
Set up and operate the sprayer to achieve even coverage throughout the crop canopy using your chosen water volume.
Determine an appropriate dilute spray volume (see Dilute Spraying above) for the crop canopy. This is needed to calculate the concentrate mixing rate.
The mixing rate for concentrate spraying can then be calculated in the following way:

Example only
1. Dilute spray volume as determined above: For example 1200 L/ha
2. Your chosen concentrate spray volume: For example 600 L/ha
3. The concentration factor in this example is: 2 X (i.e. 1200 L ÷ 600 L = 2)
4. If the dilute label rate is 15 mL/100 L, then the concentrate rate becomes 2 x 15, which is 30 mL/100 L of concentrate spray.
The chosen spray volume, amount of product per 100 L of water, and the sprayer set up and operation may need to be changed as the crop grows. For further information on concentrate spraying, users are advised to consult relevant industry guidelines, undertake appropriate competency training and follow industry Best Practices.

APPLICATION: Bananas

Ground Application
Apply by misting or air-blast machines to provide thorough coverage of all foliage.

Aerial Application
Apply by aircraft in a minimum total volume of 20 L/ha.

APPLICATION: Wheat

DO NOT apply to wheat by aircraft.

Ground Application
Apply in spray volumes from 50 to 100 L of water /ha using a medium quality spray. Good coverage is required for best results.

PRECAUTION: Re-entry Period
DO NOT allow entry into treated areas until the spray has dried unless wearing cotton overalls (or equivalent clothing) and chemical resistant gloves. Clothing must be laundered after each day.
PROTECTION OF WILDLIFE, FISH, CRUSTACEANS AND ENVIRONMENT

DO NOT apply Indar Fungicide to nectarines or wheat by aircraft. Spray drift may occur under adverse meteorological conditions or from certain spray equipment. DO NOT apply under weather conditions or from equipment that may cause spray drift onto sensitive areas including, but not limited to, non-target plants/crops, cropping land, pasture, natural streams, rivers, wetlands or waterways and human dwellings. DO NOT contaminate streams, rivers or waterways with the chemical or used containers.

STORAGE AND DISPOSAL

Store in the closed, original container in a dry, cool, well-ventilated area out of direct sunlight. Store in a locked room or place away from children, animals, food, feedstuffs, seed and fertilisers.

The method of disposal of the container depends on the container type. Read the STORAGE and DISPOSAL instructions on the label that is attached to the container.

SAFETY DIRECTIONS

• When opening the container, preparing spray and using the prepared spray (by ground application only), wear cotton overalls buttoned to the neck and wrist (or equivalent clothing) and a washable hat and elbow-length chemical resistant gloves.
• After each day’s use, wash gloves and contaminated clothing.

FIRST AID

If poisoning occurs, contact a doctor or Poisons Information Centre. Phone: Australia 13 11 26.
