

Scientific Research Demonstrates Effectiveness of the Sentricon® System

At the foundation of the Sentricon System is a research base unparalleled by any other termite bait technology. Extensive field tests completed by the U.S. Department of Agriculture's Forest Service and research conducted by 30 universities and external research contractors have resulted in the publication of more than 70 scientific articles providing independently produced data on Sentricon and evidence of its ability to eliminate termite colonies. This bibliography includes many of the publications in the scientific literature concerning field and laboratory testing of Sentricon and/or its components.
