PROVEN PORTFOLIO OF CROP PROTECTION SOLUTIONS.

Count on GoldSky® herbicide to deliver control of the toughest grass weeds in spring and winter wheat, including cheatgrass, wild oats (including ACCase-resistant) and yellow foxtail, plus suppression of green foxtail. GoldSky also controls broadleaf weeds such as mustards, wild buckwheat, kochia, volunteer canola, lambsquarters, pigweed and many others. Tank-mixing MCPA or 2,4-D broadens the control spectrum to include Russian thistle. Only GoldSky delivers cross-spectrum control of tough grasses and broadleaf weeds with crop safety and rotational freedom, making it the best value for weed control in spring wheat.

WideMatch® herbicide controls and suppresses more weeds than any other small grains herbicide. It combines two powerful active ingredients in a convenient premix formulation to deliver excellent, consistent control of the widest spectrum of postemergence broadleaf weeds — more than 60 species. It takes out the top three high-anxiety weeds in cereal crops — kochia, wild buckwheat and Canada thistle. WideMatch even controls weeds up to 8 inches tall, making it the ideal tool for managing large, hard-to-control kochia.

Innovative PowerFlex® HL herbicide provides excellent postemergence cross-spectrum control of stubborn grasses and broadleaf weeds, such as downy brome (cheat), wild oats, ALS-susceptible Italian ryegrass, pigweed, cleavers and chickweed. With crop safety, a wide application window and a short three-month rotation interval for soybeans, cotton, grain sorghum and sunflowers in many geographies, PowerFlex HL offers powerful weed control priced for the needs of winter wheat growers. (See product label for specific crop rotation intervals in Idaho, Oregon and Washington.)

Starane® Flex herbicide from Dow AgroSciences controls the toughest broadleaf weeds — including large, more mature and ALS-resistant kochia, mustard, wild buckwheat, prickly lettuce, cleavers, volunteer canola and others—with the flexibility to rotate to sensitive crops like pulse and potatoes. Tank-mixing MCPA or 2,4-D broadens the control spectrum to include Russian thistle, pigweed, lambsquarters and other high-anxiety species, and there’s no antagonism when tank-mixing with fungicides, including strobilurins.

Starane® NXT herbicide — a convenient premix formulation of two proven active ingredients — it is an ideal weed control tool for small grains growers needing complete rotational flexibility. Starane NXT allows growers to plant any crop the season following application, including potatoes, field peas and lentils. It controls tough broadleaf weeds, such as kochia, wild buckwheat, volunteer canola, sunflower and Russian thistle, and is tank-mix-compatible with all leading grass herbicides.

Starane® Ultra herbicide controls tough, yield-robbing weeds, such as kochia, bedstraw (cleavers), cocklebur and ragweed, and provides excellent control of large kochia — even ALS-resistant biotypes. It provides the same outstanding performance in the field growers have to expect from Starane, including excellent crop safety.
BROADLEAF WEEDS CONTROLLED BY THE DOW AGROSCIENCES PORTFOLIO OF HERBICIDES

- Biennial wormwood: Artemisia biennis Willd.
- Blue mustard: Chorispora tenella
- Canada thistle: Cirsium arvense (L.) Scop.
- Carolina geranium: Geranium carolinianum
- Catchweed bedstraw (cleavers): Galium aparine L.
- Chickweed: Stellaria media (L.) Vill.
- Common cocklebur: Xanthium strumarium L.
- Common mallow: Malva neglecta Wallr.
- Common ragweed: Ambrosia artemisiifolia L.
- Corn gromwell: Lithospermum arvense L.
- Dandelion: Taraxacum officinale Weber
- Field bindweed: Convolvulus arvensis L.
