

# Pixxaro™

## TECHNICAL BULLETIN

### HERBICIDE

### ARYLEX™ ACTIVE

#### Pixxaro™:

Delivers new, high performance broadleaf weed control for wheat and barley, containing a powerful Group 4 active called Arylex™.

- Offers a worry-free experience for wheat and barley growers
- Provides durable performance with non-traditional attributes
- Controls weeds plus improves time and risk management

#### With Arylex Active:

- The first active from a new class of synthetic auxins
- Extremely low-dose rates and efficacy under a wide range of climatic conditions
- A unique and game-changing Group 4 herbicide

#### What does Pixxaro do?

Delivers worry-free control of the weeds you have (1-8 leaf or more).

Chickweed <i>(Incl. ALS resistant)</i>	Henbit	Stink weed
Cleavers (9 whorl) <i>(Incl. ALS resistant)</i>	Kochia <i>(Incl. ALS resistant)</i>	Stork's-bill
Common groundsel	Lamb's-quarters	Volunteer canola (All)
Common ragweed	Redroot pigweed	Volunteer flax
Flixweed	Round-leaved mallow	Wild buckwheat
Hemp-nettle <i>(Incl. ALS resistant)</i>	Shepherd's-purse	Wild mustard <i>(Incl. ALS resistant)</i>

Excellent Control = 91-100%

Canada thistle	Smartweed
Suppression	

**Crops:** All spring wheat, durum wheat, winter wheat, barley

**Crop stage:** 3-leaf to flag leaf

**Crop safety:** Very safe

**Rainfastness:** 1-hour

**Tank-mixability:** Any registered grass herbicide

**Crop Rotation:** All major crops except lentils. Testing is ongoing

#### How does Pixxaro work?

The Group 4 mode of action has provided effective weed control for over 60 years in North America. According to [www.weedscience.org](http://www.weedscience.org) there have been 10 incidents of Group 4 resistant broadleaf weeds in North America, compared with over 150 incidents with Group 2 resistant broadleaf weeds. After only 8 years of use, weeds resistant to Group 27 herbicides in the USA were confirmed, with a total of 6 incidents identified to date. It is clear that the Group 4 mode of action has stood the test of time and the new chemical family of Arylpicolinates (Arylex) continues that tradition.

### ALL YOU NEED TO KNOW

#### WHEN does Pixxaro do it?

With flexible crop and weed staging, Pixxaro works on your schedule. Plan your spraying operation field by field, without the need to alter plans to catch a restrictive weed or crop stage. Pixxaro also performs under a wide range of climatic conditions. Hot, cold, wet or dry, Pixxaro keeps you on schedule and works under conditions where other products may fail.

#### WHAT does Pixxaro mix with?

For grass and broadleaf weed control, tank-mix with any grass herbicide registered for use in wheat or barley. Pixxaro is the right choice, regardless of what grassy weeds are present or what grass weed herbicide is used.

#### WHY should I care?

Weed control performance and crop safety are now table stakes. Pixxaro delivers unparalleled efficacy, flexibility, time and risk management. It will make your broadleaf weed control decision easy and will keep your spraying on schedule.

For all your annual broadleaf weed control concerns, Pixxaro provides worry-free, reliable performance on large or small weeds, in large or small crops, with complete tank-mix freedom.

## Pixxaro redefines performance

### Wild buckwheat
