THE PULP IS PUT BACK INTO THE JUICE

THE DISTRIBUTOR STOCKS STORE SHELVES WITH ORANGE JUICE

Florida produces about 67% of the U.S. oranges and accounts for about 40% of the world's orange juice supply.

Mass produced orange juice began in the mid-1910s when California had an overproduction of oranges.

The US consumes 4.2 gallons of orange juice per person per year.

Orange juice protects against inflammation, helping to prevent the development of insulin resistance and atherosclerosis.
