Product Overview
- DOW™ Propylene Glycol is a viscous, colorless, odorless liquid.\(^1\,2\) For further details, see Product Description.
- DOW Propylene Glycol is used as a raw material for the manufacture of other chemicals and as an ingredient in product formulations. Applications include unsaturated polyester resins, urethanes, coolants and antifreeze, aircraft deicing fluid, hydraulic and brake fluids, heat transfer fluids, and fragrances, cosmetics, personal care products, and pharmaceuticals.\(^3\,4\) For further details, see Product Uses.
- Worker exposure is possible at propylene glycol production facilities, during transport, or at the various industrial or manufacturing facilities that use propylene glycol. Occupational exposure limits have been established to control the allowable amount of exposure in workplace settings. Propylene glycol is broadly used in consumer products including perfumes and colognes, cosmetics, hand sanitizer, deodorant, shampoo, and many others. DOW Propylene Glycol used for personal care applications is a high-purity product that meets the safety standards of the United States Pharmacopeia (USP), U.S. Food and Drug Administration (FDA), European Council Directive 76-768/EEC, and other global safety standards.\(^5\,6\) For further details, see Exposure Potential.
- Eye contact with propylene glycol may cause slight, temporary irritation. Prolonged skin contact is unlikely to result in absorption of harmful amounts. At room temperature, exposure to vapor is minimal due to low volatility.\(^7\) For further details, see Health Information or the relevant Safety Data Sheet.
- Propylene glycol is readily biodegradable, unlikely to accumulate in the food chain, and is practically non-toxic to fish and aquatic organisms.\(^8\) For further details, see Environmental Information.

\(^{TM}\)Trademark of The Dow Chemical Company (“Dow”) or an affiliated company of Dow

Revised: October 3, 2013  The Dow Chemical Company  Page 1 of 6
DOW™ Propylene Glycol is stable under recommended storage conditions. Exposure to elevated temperatures can cause this product to decompose. Avoid contact with strong acids, strong bases, and strong oxidizers. For further details, see Physical Hazard Information.

Manufacture of Product
- **Capacity** – The world production capacity for propylene glycols in 2010 was 1.6 million metric tons (3.5 billion pounds). This includes mono-, di-, and tripropylene glycols. The Dow Chemical Company is the major global producer of propylene glycols. Dow’s 2010 estimated annual production capacity was 760,000 metric tons (1.7 billion pounds). Dow has propylene glycol production facilities in Altona, Australia; Aratu, Bahia, Brazil; Freeport, Texas and Plaquemine, Louisiana (USA); Map Ta Phut, Thailand; and Stade, Germany.
- **Process** – Monopropylene glycol is produced by reacting propylene oxide with water. The chemical reaction appears below.

Product Description
DOW™ Propylene Glycol, also called monopropylene glycol, is a viscous, colorless, odorless liquid. It does not evaporate (nonvolatile) at room temperature and is completely soluble in water. Dow manufactures propylene glycol industrial grade and a high-purity product called Propylene Glycol USP/EP.

Product Uses
DOW™ Propylene Glycol is used in the following applications:
- Antifreezes, coolants, and aircraft deicing fluids
- Heat transfer fluids
- Solvents
- Food
- Flavors and fragrances
- Cosmetics and personal care products
- Pharmaceuticals
- Chemical intermediates
- Hydraulic fluids
- Plasticizers
- Thermoset plastic formulations

Exposure Potential
DOW™ Propylene Glycol is used in the production of industrial and consumer products. Based on the uses for propylene glycol, individuals could be exposed through:
- **Workplace exposure** – Exposure can occur in a propylene glycol manufacturing facility, during transport or in the various industrial or manufacturing facilities that use propylene glycol. It is produced, distributed, and stored in closed systems. Those working with propylene glycol in manufacturing operations could be exposed during maintenance, sampling, testing or other procedures.
manufacturing facility should have a thorough training program for employees, appropriate work processes, and safety equipment in place to limit exposure. See Health Information.

- **Consumer exposure to products containing DOW Propylene Glycol** – Dow does not sell propylene glycol for direct consumer use, but it is widely used in consumer product formulations such as liquid laundry detergents, pharmaceuticals, shampoos and shaving products, toothpaste, bath and shower products, baby wipes, cosmetics, deodorants, and many other personal care products. Always read the product information before use and follow the label/use instructions. DOW Propylene Glycol used for personal care products, pharmaceuticals, and food applications is a high-purity product that meets the global standards of the Food Chemical Codex (FCC), United States Pharmacopeia (USP), European Pharmacopeia (EP), Japanese Pharmacopeia (JP), Brazilian Pharmacopeia (FB), U.S. FDA, and European Council Directive 76/768/EEC. See Health Information.

- **Environmental releases** – Small quantities of propylene glycol may be released into the environment if consumer products that contain them are poured down the drain. Because propylene glycol is completely soluble, once it is introduced to water, it will tend to remain dissolved in water. Because propylene glycol is readily biodegradable, it will be removed by sewage treatment plants. In the event of a spill, the focus is on containing the spill to prevent contamination of soil and surface or ground water. Propylene glycol is practically nontoxic to fish and other aquatic organisms. See Environmental, Health and Physical Hazard Information.

- **Large release** – Industrial spills or releases are infrequent and generally contained. If a large spill does occur, dike area to contain spill. Pump into suitable and properly labeled containers. Spilled material may cause a slipping hazard. Use appropriate safety equipment.

- **In case of fire** – Isolate fire and deny unnecessary entry. Fight fire from a protected location, and consider the use of unmanned hose holders. Use a water fog or fine spray, dry chemical extinguisher, carbon dioxide (CO2) extinguisher, or foam to fight fire. Alcohol-resistant foams are preferred. A direct water stream may spread the fire. Firefighters should wear a positive-pressure self-contained breathing apparatus (SCBA) and protective firefighting clothing. Follow emergency procedures carefully. See Environmental, Health and Physical Hazard Information.

For more information, see the relevant Safety Data Sheet.

**Back to top**

**Health Information**

- **Eye contact** – Eye contact with propylene glycol may cause slight, temporary irritation. Corneal injury is unlikely. Contact with heated vapor or mist during manufacturing may cause eye irritation.

- **Skin contact** – Prolonged skin contact is unlikely to result in absorption of harmful amounts. Repeated exposure may cause softening and flaking of the skin.

- **Inhalation** – At room temperature, exposure to vapor is minimal due to low volatility. Mist may cause irritation of upper respiratory tract (nose and throat).

- **Ingestion** – This material has very low toxicity if swallowed. Harmful effects are not anticipated from swallowing small amounts.

- **Repeated exposure** – In rare cases, repeated excessive exposure to propylene glycol may cause central nervous system effects.

- **Cancer information** – Animal studies under exaggerated conditions have demonstrated no link to carcinogenicity. For more information, see the relevant Safety Data Sheet.

**Back to top**

**Environmental Information**

DOW™ Propylene Glycol is nonvolatile (does not evaporate). Because it is highly soluble in water, once introduced, it has a tendency to remain in water. It has minimal tendency to bind to soil or sediment. Propylene glycol is unlikely to persist in the environment. Propylene glycol is readily biodegradable, which suggests the chemical will be rapidly and completely removed from water and soil environments, including biological wastewater treatment plants.

---

*™Trademark of The Dow Chemical Company (“Dow”) or an affiliated company of Dow*
Propylene glycol is not likely to accumulate in the food chain (bioconcentration potential is low) and is practically nontoxic to fish and other aquatic organisms on an acute basis.

The OECD SIDS Initial Assessment Report for 1,2-Dihydroxypropane (propylene glycol) concluded that, based on the known properties and exposure patterns, the chemical is currently considered of low potential risk to the environment, and low priority for further work.

For more information, see the relevant Safety Data Sheet.

Physical Hazard Information

DOW™ Propylene Glycol is stable under recommended storage and use conditions. Exposure to elevated temperatures can cause this product to decompose. Protect from atmospheric moisture and store away from direct sunlight.

Avoid contact with strong acids, strong bases, and strong oxidizers. Spilled material may cause a slipping hazard.

For more information, see the relevant Safety Data Sheet.

Regulatory Information

Regulations may exist that govern the manufacture, sale, transportation, use and/or disposal of DOW™ Propylene Glycol. These regulations may vary by city, state, country or geographic region. Information may be found by consulting the relevant Safety Data Sheet, Technical Data Sheet, or Contact Us.

NOTICES

As part of its 2015 Sustainability Goals, Dow has committed to make publicly available safety assessments for its products globally. This product safety assessment is intended to give general information about the chemical (or categories of chemicals) addressed. It is not intended to provide an in-depth discussion of health and safety information. Additional information is available through the relevant Safety Data Sheet, which should be consulted before use of the chemical. This product safety assessment does not replace required communication documents such as the Safety Data Sheet.

The information herein is supplied upon the condition that the persons receiving same will make their own determination as to its suitability for their purposes prior to use. In no event will Dow be responsible for damages of any nature whatsoever resulting from the use of or reliance upon the information herein or the product to which that information refers.

Nothing contained herein is to be construed as a recommendation to use any product, process, equipment or formulation in conflict with any patent, and Dow makes no representation or warranty, express or implied, that the use thereof will not infringe any patent.

NO REPRESENTATIONS OR WARRANTIES, EITHER EXPRESS OR IMPLIED, OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE OR OF ANY OTHER NATURE ARE MADE HEREUNDER WITH RESPECT TO INFORMATION OR THE PRODUCT TO WHICH INFORMATION REFERS.

Dow makes no commitment to update or correct any information that appears on the Internet or on its World-Wide Web server. The information contained in this document is supplemental to the Internet Disclaimer, www.dow.com/homepage/term.asp.
