NORDEL™ EPDM
Handling Guide and FDA Status
Handling Guide and FDA Status

Many grades of NORDEL™ EPDM are available commercially. These products are based on ethylene, propylene, and ethylidene norbornene. All are members of the broad family of ethylene propylene diene monomer (EPDM) polymers offered by Dow.

NORDEL™ EPDM products are made in a solution process and are sold in a bale form and as free flowing pellets where polyethylene dust is used as a partitioning agent.

Raw Polymer Handling

Some types of NORDEL™ EPDM are supplied in pelletized form. Pouring or conveying pellets may cause static ignition hazards. In addition, NORDEL™ EPDM pellets are coated with polyethylene dust which is combustible. Use proper grounding when transferring pellets to minimize risk of static ignition. Refer to the National Fire Protection Association (NFPA) RP77 “Recommended Practice on Static Electricity” for guidance in reducing the fire hazards associated with static electricity.

NORDEL™ EPDM resins are packaged in inclusion bags to allow the product to be added to the mixer without opening the bag if the polymer is mixed at sufficiently high temperature (e.g., >110°C [230°F]). This innovation helps to limit the amount of packaging waste and reduces the opportunity for contamination and housekeeping problems. Consult a Dow technical representative to determine the exact characteristics of the packaging available for the product you are interested in.

Some grades of NORDEL™ EPDM are supplied in compact bales for which static discharge normally is not a factor. Bales are also packaged using an inclusion film. Before use, refer to the most current Material Safety Data Sheet (MSDS), available from your Dow customer service representative.
Acute Oral Toxicity
Oral LD50 has not been determined. Based on tests conducted on similar products, it is understood that oral toxicity may be very low, on a single dose basis.

Inhalation Toxicity
The polymer contains traces of ethylenedene norbornene (ENB) which may be released during storage and processing. ENB is moderately toxic with an LD50 of 732 ppm/4H (inhalation, mouse). Under normal storage and processing conditions with adequate ventilation and exhaust, the ACGIH TLV-C for ENB should not be reached\(^\text{1}\). Exposure to ENB vapors may cause irritation of the respiratory tract, with symptoms such as nasal discomfort and discharge, and coughing possibly accompanied by chest pains, headache, or dizziness. Eye contact with ENB vapor may be irritating.

Fumes may evolve during hot processing of compounds of NORDEL™ EPDM that may irritate eyes, nose, and throat. Polymer dust may cause irritation to the upper respiratory tract.

Skin Contact
The polymer could be slightly irritating to skin. Skin absorption is unlikely due to the physical properties of NORDEL™ EPDM.

Thermal and Oxidative Degradation
NORDEL™ EPDM products have been stabilized for normal operating and curing temperatures. Abnormally high temperatures, particularly in the presence of oxygen, can lead to degradation. The main decomposition products are anticipated to be carbon monoxide, carbon dioxide, organic fragments, and their oxidation products. Laboratory tests indicate that at a temperature of 170°C (338°F), an exothermic reaction will start in approximately 15 minutes. In the absence of oxygen, the product is stable to much higher temperatures, but temperatures greater than 200°C (392°F) should be avoided to prevent thermal decomposition.

Possibility of Fire When Blending EPDM Polymers
EPDM polymers, such as NORDEL™ EPDM products, may evolve low-molecular weight polymer fragments or other volatiles. If ventilation in the mixer is poor, combustible vapor could accumulate in the air space of an internal mixer during mastication or blending. The possibility of fire exists if ventilation in the mixer is poor and higher than recommended temperatures are reached in the mixer. The potential for a fire is minimized by maintaining mixing temperatures below 199°C (390°F), by providing good ventilation in the mixer and the processing area, and by maintaining good static control.

Storage and Handling
The quality of EPDM products may be affected by exposure to artificial or natural light that contains ultraviolet (UV) radiation. These polymers should be stored indoors in their original packaging and out of direct sunlight. If it is necessary to remove part of the contents of the package, protect the remaining product with a light-blocking material. NORDEL™ EPDM grades are best stored under low humidity conditions, away from direct sunlight and other sources of UV light.

\(^\text{1}\) Currently, the TLV-C value is 5 ppm. Always check the current Dow MSDS for current TLV-C value.
radiation, and at temperatures between 10 and 21°C (50 and 70°F). Extended storage and/or exposure to a source of UV radiation may cause the polymer to cross-link and form gels. When in doubt, Mooney viscosity measurement is a good indicator of storage stability.

**Warehouse Stacking**

Various available packaging options have different stacking requirements: Flexible Intermediate Bulk Containers (FIBCs) can be stacked only one high. The free flowing pellet products, packaged 40 bags to a pallet and stretch wrapped, also can only be stacked one high. Bulk boxes of semi-crystalline NORDEL™ EPDM can be stacked three high.

Amorphous products (or palletized product that is partially compacted) packaged in boxes can be stacked two high (see photo below).

**Compounding of NORDEL™ EPDM**

The pellet versions of NORDEL™ EPDM products require slightly higher fill factors at the beginning of the mixing cycle, as the effective bulk density of the compound is lower vs. bale rubber. Fill factors in the range of 75-80 percent are found to be suitable for single pass mixing. Ram pressure is also important, as efficient packing of the material is necessary in the mixing chamber at the beginning of the mixing cycle. A 5 bar ram pressure is generally found to be suitable. The mixer body temperature should be 70°C (158°F) or higher to be above the low temperature melting peak (typically 50-60°C [122-140°F]) for semi-crystalline polymer. Loading RPM should be low, followed by high RPM for the actual mix cycle. Upside down mixing is typically recommended. Faster mixing is possible with the pelletized NORDEL™ EPDM.

**Compounding Ingredients**

Many compounding ingredients and techniques (e.g., mixing time, temperature) are employed during conversion of NORDEL™ EPDM to end-products. These may alter the toxicity as well as the handling precautions for the product during intermediate stages or in its finished form. Even when no danger from individual compounding ingredients exists, there is no assurance that a combination of these ingredients will be equally non-hazardous. Consequently, it is the responsibility of each user to determine whether techniques, processes, and additives comply with government regulations and are safe with respect to both employees and customers.

Compounding ingredients, including peroxides, solvents, talc, carbon black, and lead-based curing agents used with NORDEL™ EPDM to prepare finished products may present hazards in handling and use. Before proceeding with any compounding work, always consult and follow all label directions, handling precautions, and Material Safety Data Sheets (MSDSs) from the suppliers of all ingredients.
Lead-containing compounding chemicals can have a toxic effect on human blood, kidneys, and nervous and reproductive systems. Effective March 1, 1979, the Occupational Safety and Health Administration (OSHA) promulgated a new standard for occupational exposure to lead, 29 CFR 1910.1025, which includes in its coverage metallic lead, inorganic lead compounds, and organic lead soaps. This standard establishes a permissible exposure level for lead of 50 µg/m³ (8-hr time-weighted average) in the workplace.

Be sure to review the current MSDS for the specific product before starting.

**NORDEL™ EPDM in Applications Regulated by the Food and Drug Administration (FDA)**

FDA overview information in this section is provided as a convenience to the reader. The current Code of Federal Regulations should be consulted to ensure that all requirements for pertinent food contact application(s) are met. It is the responsibility of the article manufacturer to establish FDA compliance of the article to be used in Food Contact Service.

Many of the NORDEL™ EPDM products are compliant with one or more of the following FDA Regulations with use restrictions as defined in the Regulations (see Table 1, below):

- 21 CFR 177.2600 – “Rubber Articles Intended for Repeated Use”
- 21 CFR 177.1520 – “Olefin Polymers”
- 21 CFR 175.105 – “Adhesives”
- 21 CFR 177.1210 – “Closures with Sealing Gaskets for Food Containers”

If a food contact application is targeted, please consult a technical representative regarding the FDA compliance status of the NORDEL™ EPDM product for your application.

**Articles Intended for Food Contact**

Reference: 21 CFR 177.2600 Rubber Articles Intended for Repeated Use

This regulation defines the polymers and compounding ingredients that can be used in vulcanized rubber articles intended for repeated use in producing, manufacturing, packing, processing, preparing, treating, packaging, transporting, or holding food subject to provisions of the regulation.

1. Review current Code of Federal Regulations for specific details pertaining to food contact requirements.
2. Can be used in contact with all foods except water in oil emulsions, high or low fat, and low moisture fats and oil.
3. Adhesives only.
4. Compliant as a blend component in compliant polymers at levels up to 25% for conditions of use E through G.

™Trademark of The Dow Chemical Company (“Dow”) or an affiliated company of Dow
There are limitations on the amount of certain compounding ingredients, as follows:

**Accelerators** – Total is not to exceed 1.5 percent by weight of rubber product.

**Retarders** – Total is not to exceed 10 percent by weight of rubber product.

**Activators** – Total is not to exceed 5 percent by weight of rubber products, except magnesium oxide, which may be used at higher levels.

**Antioxidants and Antiozonants** – Total is not to exceed 5 percent by weight of rubber product.

**Plasticizers** – Total is not to exceed 30 percent by weight of rubber product unless otherwise specified.

**Filler** – No maximum is given except for carbon black. Channel process or furnace combustion process, total carbon black is not to exceed 50 percent by weight of rubber product; furnace combustion black content is not to exceed 10 percent by weight of rubber products intended for use in contact with milk or edible oils.

**Colorants** – Are to be used in accordance with 21 CFR 178.3297.

**Lubricants** – Total is not to exceed 2 percent by weight of rubber product.

**Emulsifiers** – No maximum is given.

**Sulfur** – No maximum is given.

**Olefin Polymers**

Reference: 21 CFR 177.1520 Olefin Polymers

Olefin copolymers complying with this regulation may be used as articles, or components of articles, intended for use in contact with food subject to provisions of the regulation.

NORDEL™ EPDM products containing not more than 5 wt% of total polymer units derived by copolymerization with 5-ethylidene-2-norbornene, with a minimum viscosity average molecular weight of 120,000, with a minimum Mooney viscosity of 35 and density of .85-.90 (see Table 1, page 5), may contact foods of types identified in 21 CFR 176.170(c), Table 1 under types I, II, III, IV –B, VI, VII, VIII and IX. (See Table 2, below, for types of raw and processed foods that can come into contact with NORDEL™ EPDM grades compliant with 21 CFR 177.1520.)

(1) Food classification from 21 CFR 176.170(c) (See Table 1, page 5)

(™Trademark of The Dow Chemical Company (“Dow”) or an affiliated company of Dow)
Components of Adhesives

Reference: 21 CFR 175.105 Adhesives

This regulation includes substances that may be used as components of adhesives which may be used as components of articles intended for packaging, transporting, or holding food. In such uses, the adhesives must either be separated from the food by a functional barrier or be subject to the additional limitations outlined in 21 CFR 175.105 (a) 2 (i-ii). The NORDEL™ EPDM products that may be used as components of adhesives in compliance with this regulation are listed in Table 1 (see page 5).

Closures

Reference: 21 CFR 177.1210 Closures with Sealing Gaskets for Food Containers

This regulation includes substances that may be used as closure sealing gaskets on containers intended for use in producing, manufacturing, packing, processing, preparing, treating, packaging, transporting, or holding food subject to provisions of the regulation.

NORDEL™ EPDM products containing not more than 5 wt% of total polymer units derived by copolymerization with 5-ethylidene-2-norbornene, with a minimum viscosity average molecular weight of 120,000 and with a minimum Mooney viscosity of 35 (see Table 1, page 5) may be used in contact with food as a closure sealing gasket subject to provisions of 21 CFR 177.1210.

NOTE: Information in this section provides an overview of the FDA Regulations pertaining to food contact. For specifics, refer to the actual, current Code of Federal Regulations.
The principles of Responsible Care® and Sustainable Development influence the production of printed literature for The Dow Chemical Company ("Dow"). As a contribution towards the protection of our environment, Dow's printed literature is produced in small quantities and on paper containing recovered/post-consumer fiber and using 100 percent soy-based ink whenever possible.

NOTICE: Any photographs of end-use applications in this document represent potential end-use applications but do not necessarily represent current commercial applications, nor do they represent an endorsement by Dow of the actual products. Further, these photographs are for illustration purposes only and do not reflect either an endorsement or sponsorship of any other manufacturer for a specific potential end-use product or application, or for Dow, or for specific products manufactured by Dow.

NOTICE: No freedom from infringement of any patent owned by Dow or others is to be inferred. Because use conditions and applicable laws may differ from one location to another and may change with time, the Customer is responsible for determining whether products and the information in this document are appropriate for the Customer’s use and for ensuring that the Customer’s workplace and disposal practices are in compliance with applicable laws and other governmental enactments. Dow assumes no obligation or liability for the information in this document. NO WARRANTIES ARE GIVEN; ALL IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE ARE EXPRESSLY EXCLUDED.

NOTICE: If products are described as "experimental" or "developmental": (1) product specifications may not be fully determined; (2) analysis of hazards and caution in handling and use are required; (3) there is greater potential for Dow to change specifications and/or discontinue production; and (4) although Dow may from time to time provide samples of such products, Dow is not obligated to supply or otherwise commercialize such products for any use or application whatsoever.

NOTICE REGARDING MEDICAL APPLICATION RESTRICTIONS: Dow will not knowingly sell or sample any product or service ("Product") into any commercial or developmental application that is intended for:

a. long-term or permanent contact with internal bodily fluids or tissues. "Long-term" is contact which exceeds 72 continuous hours;

b. use in cardiac prosthetic devices regardless of the length of time involved ("cardiac prosthetic devices" include, but are not limited to, pacemaker leads and devices, artificial hearts, heart valves, and ventricular bypass-assisted devices);

c. use as a critical component in medical devices that support or sustain human life; or

d. use specifically by pregnant women or in applications designed specifically to promote or interfere with human reproduction.

Dow requests that customers considering use of Dow products in medical applications notify Dow so that appropriate assessments may be conducted.

Dow does not endorse or claim suitability of its products for specific medical applications. It is the responsibility of the medical device or pharmaceutical manufacturer to determine that the Dow product is safe, lawful, and technically suitable for the intended use. DOW MAKES NO WARRANTIES, EXPRESS OR IMPLIED, CONCERNING THE SUITABILITY OF ANY DOW PRODUCT FOR USE IN MEDICAL APPLICATIONS.

This document is intended for use in North America.
