AIR-SEAL AUDIT CHECKLIST
The U.S. Environmental Protection Agency estimates that homeowners can typically save up to 20 percent on heating and cooling costs by air sealing and insulating. Take matters into your own hands (or, in this case, your own finger) with GREAT STUFF™ Insulating Foam Sealants. All of the projects on this checklist can be completed within a couple of hours with several cans of GREAT STUFF™ Insulating Foam Sealants.

### COMPLETE CHECKLIST

<table>
<thead>
<tr>
<th>Attic</th>
<th>Basement</th>
<th>Living Space</th>
<th>House Exterior</th>
</tr>
</thead>
</table>
| • Attic hatch frame (outer perimeter)  
• Plumbing stacks and shafts  
• Gas lines  
• HVAC penetrations  
• Electrical and cable lines  
• TV connections  
• Look for dirty insulation, which can indicate air infiltration | • Sill plate  
• Rim joist  
• Floor wall junction  
• Headers  
• Gas lines  
• PVC pipe penetrations (water and waste)  
• HVAC duct penetrations  
• Window and door frames without trim (use Window & Door formula)  
• Around the perimeter of electrical outlets (not inside box)  
• Plumbing penetrations  
• Around the perimeter of covered wire and electrical conduit penetrations on exterior walls  
• Air/heat vents  
• Central vac system piping | • Under baseboards  
• Gas line penetrations  
• Window and door frames (during installation with Window & Door formula)  
• Around perimeter of electrical outlets (not inside box)  
• Plumbing penetrations  
• Around the perimeter of covered wire and electrical conduit penetrations on exterior walls  
• Air/heat vents  
• Central vac system piping | • Electric, gas, cable and A/C penetrations  
• Vent hoods  
• Exterior garage walls  
• Outside water faucet  
• Dryer vent  
• Cooling line from A/C condenser (outside on a concrete pad) and heat pump penetration into house |

**ATTIC**

What’s hotter than the outdoors on a sunny summer day? Your attic. Keep the heat out of your living space with GREAT STUFF™ Insulating Foam Sealants.

### Attic Hatch

While the insulation in your attic may have an acceptable R-value*, the attic hatch door system is often the weakest link in the attic insulation. To help keep the conditioned air in the living space from escaping through the attic, air seal the gap between the attic hatch door frame and the ceiling joists.

1. Pick a day when the attic temperature is bearable.
2. Remove loose pieces of insulation in the gap before foaming.
3. Place the GREAT STUFF™ Insulating Foam Sealant straw in the gap and start foaming. Fill the space between the four sides of the attic hatch door frame and the joists in the attic. Do not overfill.

### HVAC

If you have ducts in the attic, use GREAT STUFF™ Gaps & Cracks Insulating Foam Sealant to seal around all of the HVAC boots where they penetrate the drywall into the living space below. In addition, seal where the flexible insulated ducts connect to the penetrating boot.

---

*R means resistance to heat flow. The higher the R-value, the greater the insulating power.
Rim Joist
The rim joist caps the end of the floor joists, forming a box. This is the area where the clapboard siding typically ends, which is why it is a primary source of air infiltration into the house. To identify the rim joist, look up to where the basement wall meets the basement ceiling. The rim joist may already be insulated with fiberglass batt insulation, or it may not be insulated at all. In either case, the rim joist should be air sealed and insulated with GREAT STUFF™ Gaps & Cracks.

1. Use a ladder to investigate what the area looks like at the end of each floor joist. Remove any existing insulation from the rim joist area.
2. If batt insulation, such as fiberglass or SAFETOUCH™ Fiberglass-Free Insulation, will be used at the rim joist, use GREAT STUFF™ Gaps & Cracks to seal the four intersecting edges of each rim joist “box.”
3. A better insulation option is to cut pieces of foam board, such as STYROFOAM™ Brand Extruded Polystyrene (XPS) Foam Insulation up to 2 inches thick or THERMAX™ Insulation up to 4 inches thick, to fit in each rim joist “box.” After installing the foam board, use GREAT STUFF™ Gaps & Cracks to seal around the four edges of the foam board.
4. Seal around all wires and pipes that penetrate the rim joist.

HVAC
Your air conditioning system setup might be doing more than just cooling your house. It might be an air-infiltration culprit.

1. Check the areas where the HVAC ducts enter your living space. Typically, these ducts extend from the basement up through the first floor.
2. Cover your basement floor before foaming.
3. Seal around all duct penetrations. Position your ladder so that you are not foaming directly above your head.

* In this study, air loss was measured using blower door tests. Potential energy savings were estimated using REM Home Energy Analysis Software. Results vary based on construction, style, year built and other unique home characteristics. Participating homeowners were current employees of Dow.

A recent study conducted by Dow revealed that, by sealing the sill plate/rim joist penetrations, homeowners can begin to see payback after 9.4 months, and enjoy $44 in annual savings.*
**Main Electrical Panel**

It's the hub of all electricity in the house and a large distributor of unwanted airflow.

1. Be sure to turn off the main electrical switch.
2. Stand in front of the main electrical panel and trace, starting at the top of the panel, and follow the covered wires until the main electrical supply enters the main floor of the house. Be sure that wiring is run through a pipe or a protective covering before applying foam.
3. Air seal around the entry hole to the main floor with GREAT STUFF™ Fireblock Insulating Foam Sealant.

*Note: GREAT STUFF™ Insulating Foam Sealants are combustible, so it's very important that all electrical switches are turned off before starting your project. Also, never apply foam to exposed wire or inside an electrical box. Be sure that wires have a protective covering before applying.  
*Available in the U.S. only.

---

**Electrical Outlets**

You have holes all over your house; they just may be hiding under electrical outlet covers.

1. Turn off the main electrical switch for the area of the home you will be air sealing.
2. Use a screwdriver to remove all outlet cover plates on perimeter walls.
3. Homes have holes cut in the drywall or plaster for electrical outlets. Check for gaps between the wall and the metal or plastic box that houses the electrical socket.
4. Fill the gap around the perimeter of the electrical box. Do not use GREAT STUFF™ Insulating Foam Sealant anywhere inside the box.
5. Allow the foam to cure completely (usually takes 8 hours). Trim excess foam with a serrated blade so that the foam is flush with the wall.
6. For an airtight electrical outlet seal, also utilize a foam gasket. Foam gaskets are readily available at hardware stores. Simply place the gasket over the front of the outlet.
7. Replace outlet covers.

---

**Plumbing**

While plumbing pipes may be hidden behind or under the sink, it doesn't mean that the pipe penetrations aren't allowing bugs and unwanted air into your house.

1. Check for holes under sinks where the pipes enter from the floor or wall in all rooms that have running water (kitchen, bathroom, utility room and laundry room).
2. Use GREAT STUFF™ Insulating Foam Sealant around the pipes at the wall or floor entrance.

---

* A recent study conducted by Dow revealed that, by sealing plumbing penetrations, homeowners can begin to see payback after .5 months, and enjoy $45 in annual savings.*

---

*In this study, air loss was measured using blower door tests. Potential energy savings were estimated using REM Home Energy Analysis Software. Results vary based on construction, style, year built and other unique home characteristics. Participating homeowners were current employees of Dow.*
**HOUSE EXTERIOR**

Your house’s exterior may be surrounded by wilderness; that doesn’t mean you have to invite the flora and fauna inside. Use GREAT STUFF™ Insulating Foam Sealants to help keep the outside on the outside of your home.

**Hose Bib**

Convenient for car washes and lawn care, the hose bib not only lets water out, but may be letting air in.

1. If there is enough space for your pinky finger to fit behind the water spout on the exterior of your house, you should use GREAT STUFF™ Insulating Foam Sealants.
2. Place the can’s straw in the space around the pipe and fill the entire way around the spout.
3. The foam can be trimmed with a serrated blade when the foam has cured. Paint all foam exposed to the exterior to help protect the foam from sunlight.

**Dryer Vent**

Don’t let clean laundry be the cause for high energy bills.

1. Seal the gap around the dryer vent where it exits the house. This hole can be sealed on the inside or outside, whichever is more accessible. This will help keep unconditioned air and bugs from entering your house.
2. Insert the GREAT STUFF™ Insulating Foam Sealant straw inside the gap and apply foam around the entire circumference.

**General Tips About GREAT STUFF™ Insulating Foam Sealants**

- Read the can label carefully before using for full instructions and safety precautions.
- Wear safety goggles and gloves when foaming.
- Eliminate all sources of ignition before use, including pilot lights.
- GREAT STUFF™ Insulating Foam Sealants are available in different formulas: Gaps & Cracks, Big Gap Filler, Window & Door, and Fireblock. Find the one that is right for your project. Ensure that you are using the appropriate foam around electrical and plumbing penetrations per local building code.
- The full cure time is 8 hours. To expedite curing, spritz the area with water before and after foaming.
- Do not overfill cavity. But if you do, foam can easily be trimmed with a serrated blade or utility knife once it has fully cured.
- One 12 oz. can of GREAT STUFF™ Insulating Foam Sealant yields 495 lineal feet of a 3/8" bead. One can yields up to 19 (10 oz.) caulk tubes. One 16 oz. can yields 738 lineal feet of a 3/8" bead. One can yields up to 24 (10 oz.) caulk tubes.
- You can purchase GREAT STUFF™ Insulating Foam Sealants at most local home improvement stores.

Dow Polyurethane Foam Insulation and Sealants
CAUTION: When cured, these products are combustible and will burn if exposed to open flame or sparks from high-energy sources. Do not expose to temperatures above 240°F (116°C). For more information, consult MSDS, call Dow at 1-866-583-BLUE (2583) or contact your local building inspector. In an emergency, call 1-866-686-4400 in the U.S. or 1-519-339-3711 in Canada. When air sealing buildings, ensure that combustion appliances, such as furnaces, water heaters, wood burning stoves, gas burning stoves, gas stoves and gas dryers are properly vented to the outside. See website: http://www.epa.gov/iaq/homes/hip-ventilation.html. In Canada visit: http://archive.nrccnrc.gc.ca/eng/ibp/irc/bsi/83-house-ventilation.html.

GREAT STUFF™ and GREAT STUFF PRO™ sealant and adhesive products contain isocyanate and a flammable blowing agent. Read the label and Material Safety Data Sheet carefully before use. Eliminate all sources of ignition before use. Wear long sleeves, gloves, and safety glasses or goggles. Provide adequate ventilation or wear proper respiratory protection. Contents under pressure.

Building and/or construction practices unrelated to building materials could greatly affect moisture and the potential for mold formation. No material supplier including Dow can give assurance that mold will not develop in any specific system.

The problem areas included in this checklist represent the most popular uses for GREAT STUFF™ Insulating Foam Sealants. However, this easy-to-use foam sealant can be applied in other gaps and cracks around the home to help prevent the flow of outside air into your home, or to keep your home free of pests. Visit www.dowGREATSTUFF.com for alternative ways to use GREAT STUFF™ Insulating Foam Sealants.
